

# Ahmed Razin

## UX Designer

ahmedrazin@ gmail.com | (646) 384-7503 | Portfolio: [ahmedrazin.me](https://ahmedrazin.me) | [linkedin.com/in/ahmrizin](https://linkedin.com/in/ahmrizin) | New York, NY

## SUMMARY

---

UX designer and researcher with 5 years building research infrastructure, clinical design systems, and evidence-based product strategy in high-stakes healthcare environments. Known for translating ambiguous, politically complex problems into design decisions that organizations adopt and ship. I operate where the work requires stakeholder navigation, clinical domain fluency, and original research judgment reframing executive misdiagnoses, designing quantified research frameworks from scratch, and finding cross-functional alignment.

## EXPERIENCE

---

### University of Rochester Medical Center · UX Designer

Jan 2021 – Present

Rochester, NY · 30,000-person academic health system 1.2M patients across Western New York · [urmc.rochester.edu](https://urmc.rochester.edu)

#### Established UX Research as an Organizational Discipline

- Served as the web team's lead UX research authority. Defined research and design process standards and helped shape product direction across engineering, web strategy, and clinical teams;
- **Built the team's UX research function from ground up.** Presented leadership with a research framework that converted subjective findings into defensible numerical scores. Weighted Impact Scores (Sentiment × Severity) gave stakeholders a concrete signal they could act on, turning research from a soft input into a product direction mechanism.
- **Designed and executed a 4-hypothesis A/B research study** on provider search and discovery. 11 participants, 268 coded observations, Maze click-tracking and session recording helped produce outcome metrics that improved speed of product development by increasing confidence in decisions.
  - **Achieved a 275% increase in provider profile satisfaction** (Net satisfaction: -2 baseline → +15 post-hypothesis) by identifying that users were failing to understand provider background/expertise as a visual hierarchy failure. Solved it through targeted header redesign.
  - **Drove +10.3% filter engagement and +5.9% downstream profile clicks** by diagnosing that the search filter UX was suppressing exploration. Redesigned filter labels and groupings to match patient mental models rather than internal clinical taxonomies.
  - Identified a critical divergence between **positive behavioral analytics and weak qualitative satisfaction scores**. Partnered with a data analyst in Looker Studio to triangulate both signals and present a unified interpretation to stakeholders, preventing a false-positive product decision based on analytics alone.

#### Rebuilt & Scaled the Clinical Design System Org-Wide

- **Designed a 70-component production UI library** organized across 6 clinical flows — Navigation, Provider Discovery, Location & Search, Condition Search, and Utilities — documented at full fidelity across 4 responsive breakpoints Built on 13 design token foundations, including a WCAG AA/AAA color palette engineered for older users navigating care under stress.
- **Secured executive buy-in** by identifying the development efficiency cost of a mismatch with design. Repositioned the conversation around a smoother and predictable project workflow.
- **Scaled the system across platforms**, extending it to the School of Medicine with a bespoke SMD pattern library with a deeper focus and inspiring students to apply through improved storytelling while preserving clinical brand coherence

#### Hospital and Branding Redesign Project

- **Stopped a cosmetic redesign from shipping by correctly diagnosing the problem:** administration scoped the project as a visual refresh; research revealed patients were failing navigation, not aesthetics. Shifted the project from visual refresh to IA overhaul changing what engineering built.
- **Led a mixed-methods study** (5 moderated interviews + survey to 5,500+ recipients) that produced specific IA recommendations. Renamed nav labels to match patient task language and restructured the global/hospital nav hierarchy to improve user wayfinding. The launched brand site shipped with these structural corrections built in.

- **Owned end-to-end UX as the only designer at the company**, covering user research, information architecture, interaction design, and visual UI across iOS app and marketing website from early stage through enterprise demo partnerships.
- **Conducted 30 in-store intercept interviews** at Brooklyn Fare and Gristedes. Approached shoppers in the aisles to understand their shopping behavior, decision-making patterns, and receptiveness to in-store digital experiences. Synthesized findings into a shopper persona framework that directly shaped the app's navigation model and value proposition hierarchy.
- **Secured and designed for two live in-store demo partnerships** (Brooklyn Fare, Gristedes) by redesigning the website to address the three objections store managers consistently raised: unclear ROI, insufficient proof of shopper interest, and a weak product explanation. Added key conversion metrics, a product demo video, and a dedicated demo request CTA, which increased contact emails and demo requests.
- **Diagnosed and resolved two core usability failures in the app**: an unintuitive navigation structure that left users unable to orient themselves, and a confusing initial demo menu that failed to connect the interface to its value proposition. Redesigned both flows, validated with follow-up testing via Maze, and achieved 79% of participants rating the experience as highly valuable.
- **Rebuilt the marketing website from scratch** using HTML, CSS, and Bootstrap, including a scroll-triggered demo video that played automatically in the viewport to ensure store owner visitors saw product proof without needing to seek it out.

## SKILLS

---

**Research Methods:** Moderated & unmoderated usability testing · contextual inquiry · think-aloud protocol · diary studies · surveys · competitive analysis · affinity mapping · hypothesis-driven research · mixed-methods synthesis

**Design Practice:** Design systems & token architecture · interaction design · information architecture · wireframing · high-fidelity prototyping · visual design · accessibility (WCAG 2.1 AA/AAA) · responsive design (4-breakpoint)

**AI & Data:** AI-assisted research synthesis (Claude, ChatGPT) · behavioral analytics · quantitative synthesis · Weighted Impact Scoring · HIPAA-compliant research design

**Collaboration & Process:** Cross-functional stakeholder alignment · executive presentations · design QA & handoff · design critique facilitation · agile workflow · research framework design & documentation

**Tools:** Figma · FigJam · Airtable · Looker Studio · Maze · Salesforce Marketing Cloud · Microsoft Forms · Miro · Adobe Creative Suite · After Effects · Premiere Pro · Invision

## EDUCATION

---

**NYU Tandon School of Engineering**

Sep 2015 – May 2019

Bachelor of Science, Integrated Digital Media · *Relevant coursework: User Experience Design, Intro to Web Development*
